Lead Testing Initial Test Results

On September 5th, we received the results from the first round of lead testing.

Testing criteria:

Each sample was tested for total lead content which includes dissolved and particulate. An elevated level is defined as a level of lead \geq 5ppb. Sampling was conducted per EPA test guidelines by initial draw after stagnation (periods of non-use that exceed eight hours). This manner of testing is the first step in localization and is paired with follow-up flush testing to further localize the source of any elevated levels.

Explanation of results:

While districts were only required to test "a potable water fixture that is used for drinking or food preparation", we elected to test all sources of water within the District. Those results are shown below.

Total test points sampled—288

Total samples with lead detected: 208 (72.2%)

Total samples with lead levels above the action level of 5ppb: 86 (29.8%)

When looking at only the water fixtures that might be used for drinking or food preparation, we had 18 fixtures that returned levels higher than 5 parts per billion.

The most common cause of outlets testing for elevated levels of lead (pb) is due to corrosion within the fixture itself, which is caused by low pH, low alkalinity, high temperatures, and high corrosivity.

Immediate actions:

In accordance with guidance from the EPA, the affected faucets or outlets have either been shut off or signage has been placed to indicate it is not for drinking, food prep, or washing dishes. This signage can be temporary since testing is still in progress to localize the source of lead contaminants. Additionally, lead reducing filters are being installed while further actions and remedies are investigated.

Remediation:

These are efforts to mitigate and correct the levels of lead to which students and staff are exposed: Recommendations are currently pending results of follow-up flush sample testing.

"ENGAGE, INSPIRE, EMPOWER"

FULLY ACCREDITED BY THE DEPARTMENT OF ELEMENTARY AND SECONDARY EDUCATION

Next steps:

Follow up flush samples will be collected per EPA and DHSS testing guidelines and are scheduled for September 14th, 2023.

Health:

Health information and assistance is available from

RE: Drinking Water Lead Analysis
Facility: Ava R-I

Date Received: 07/26/23
Time Received: 15:45
Relinquished by: Bob Franklin
Sampler: Bob Franklin

Chain of Custody Number: Pb-0031

Enclosed please find results for the sample(s) received as described above. The values reported are in conformance with internal and method quality control guidelines.

If you have questions or need more information, please contact us.

Thank you for your interest in working with Inovatia Laboratories.

Sincerely,

A handwritten signature in cursive script that reads "Jennifer Vandelicht".

Jennifer Vandelicht
Quality Assurance
